-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **DETAILED ACTION**

The specification and the claims suffer from non-idiomatic English and would benefit from extensive editorial polishing.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Minegishi et al.

Figure 2 shows a resonator 207 between a surge tank 201 and a mounting flange 204. While the material of the manifold is not set forth (although the cross section of the manifold appears to convey that it is polymer), it would have been obvious to one of ordinary skill in the art to construct the manifold out of resin for its lightweight and ease of manufacturing.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japan 2002-147299.

Figure 4 shows an intake manifold with a surge tank 18, a throttle body 20, a plurality of pipes 26,28, and an expanded portion to the lower right of the tank. The reference to "high" with respect to the center positions is very broad because there is no reference as to what makes it high(er?). While the material of the manifold is not set forth (although the cross section of the manifold appears to convey that it is polymer), it would have been obvious to one of ordinary skill in the art to construct the manifold out of resin for its lightweight and ease of manufacturing.

#### ***Allowable Subject Matter***

Claims 2-5 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3747

Claims 8-13 are allowed.
